

The Problem

Climate change poses the greatest challenge of our time as sea level rise, severe storms, and loss of biodiversity threaten our ocean, coastlines, and communities. The purpose of the Climate Action Program is to proactively address this urgency, protecting the places we love and fostering a sustainable future. Our challenge is to unite, take action, and overcome these obstacles, creating a resilient and vibrant future for our coastal environments.

The purpose of the Climate Action Program is to proactively address this urgency, protecting the places we love and fostering a sustainable future.

Our Solution

The Climate Action Program is designed to empower and support Surfrider chapters and clubs in their efforts to restore coastlines and ecosystems, employing nature-based solutions to mitigate and adapt to the coastal impacts of climate change.

Our approach is collaborative and hands-on. We work closely with our national network of grassroots volunteer activists, local organizations, and government agencies to identify and implement restoration projects. The habitats we restore include coastal dunes, mangrove forests, riparian areas, and various other coastal ecosystems. We encourage and welcome you to join our efforts in the Climate Action Program and become a vital part of the solution!

Get Involved

Ready to make a difference? Join your local Surfrider chapter and get involved in hands-on restoration projects. Your actions directly contribute to building resilient coastlines and protecting our coastal treasures. Working together, we can turn the tide in the fight against climate change!
